

# UTsolarD is :

helping people to live life in better balance...

changing minds about where you get your energy...

fostering collaborative design to create integrated, flexible environments...

UTsolarD is a design/build collaborative made up of an interdisciplinary team of students, faculty and industry partners based at the **University of Texas at Austin**. Our Mission is to provide leadership in the **renewable energy** revolution for a more livable, sustainable future through innovations in energy efficient building design and environmental stewardship and to be competitive in the biennial Solar Decathlons sponsored by the Department of Energy.

The Solar Decathlon is an international competition to promote solar energy as a viable, healthy, and cost effective alternative to traditional sources of energy. University teams design, build, and operate **a solar-powered house** that competes in 10 contests at the National Mall in Washington, D.C. The 2002 and 2005 Solar Decathlons were successful public events, each attracting more than 100,000 visitors. The next competition will be held in the fall of 2007.

## BUY-A-WATT

building a house takes energy. you can help!
